(e): Estimate. (f): Forecast. \*Fiscal year from 1st July - 30th June 2019 data: FY19/20.

## STRENGTHS

- East Africa's leading economy, playing a pivotal role in the East African Community, the number-one African common market
- Diversified agriculture and expanding services sector (telecommunications and financial services)
- Improving business and governance climate
- Fast-growing population and emerging middle class

## WEAKNESSES

- Dependent on hydropower and rain-fed agriculture
- Persistent bottlenecks and skills shortages
- Instability related to terrorist risk and political, social and ethnic divisions
- Persistent corruption

▪ **Robust but constrained growth**

- Growth, although still strong, is expected to weaken again in 2020, after being affected by drought conditions in 2019. Public investment in infrastructure, particularly in transport and energy, is expected to continue to drive activity. The deployment and

## BUSINESS INTELLIGENCE REPORT

improvement of the road network, the extension of the railway line between Mombasa and Nairobi to Naivasha and the development of the second container terminal at the port of Mombasa will all be major opportunities for the construction sector. However, growing budgetary constraints, as evidenced by the suspension of general government and parastatal investment spending in July 2019, are expected to result in a slowdown in these activities. These constraints will likewise negatively impact public consumption, despite support for the implementation of the “Big Four” plan focused on industrialisation, universal health coverage, food security and affordable housing. Private investment is expected to contribute to growth through PPP agreements and reforms that have improved the business climate. It should also benefit from the lifting of the the interest rate caps, which constrained credit growth. Household incomes could be constrained by higher inflation and lower remittances from expatriate workers in the United States and Europe as a result of the less favourable global economic situation, and might therefore be a drag on the contribution from private consumption. Exports are also expected to suffer from softer external demand, which will affect the expansion of the tourism and agriculture sector.

- **Debt service, the central concern**

- In 2019/2020, the budget deficit is expected to remain high, even though it may narrow. On the expenditure side, the increase in interest payments, which absorbed about 22% of the revenue collected at the end of the last financial year, will cause current expenditure to go up, despite plans to limit hiring in the public sector in order to contain the wage bill (17% of expenditure). While it should continue to be a priority, capital investment spending is expected to grow at a slower pace. Revenue should be supported by tax measures, including an increased levy on capital gains. Even so, growth will be constrained by deficient domestic revenue collection. External and domestic debt will therefore still be necessary to finance the deficit. Although still mainly concessional, the increase in commercial debt, including Eurobonds issuance, is causing an increase in debt servicing costs.
- In 2020, the current account balance is expected to remain roughly stable, posting a deficit again. The trade deficit may stabilise, as compression of the capital goods import bill offsets the increase in exports constrained by the external environment. This is also expected to hamper the growth of tourism revenues and the surplus in the services account. The increase in interest payments should contribute to a wider income account deficit. The slowdown in the EU and the United States, where the majority of expatriates live, is expected to affect the transfer balance surplus. The country's attractiveness to FDI should make it possible to finance the deficit along with debt. Foreign exchange reserves, sufficient to cover more than 5 months of imports, may support the Kenyan shilling, which is vulnerable to capital outflows given the portfolio investment stock held by foreigners.

- **A fragile domestic environment**

- In 2017, President Uhuru Kenyatta was re-elected for a second term in an election of which the result was contested by the main opponent, Raila Odinga. However, post-election tensions eased with a reconciliation agreement between the two candidates, which was sealed in March 2018. Despite this truce, the country's political, social and ethnic divisions remain unresolved and could again prove to be a source of instability in the future. The issue of the succession of Uhuru Kenyatta, who cannot constitutionally run for a third term, as the Jubilee Party candidate, may act as the catalyst to start the 2022 presidential race.
- In addition, given the country's military involvement in Somalia, Kenya remains a target for Islamist terrorism, particularly by the al-Shabab group. The terrorist attack in Nairobi that killed more than 20 people in January 2019 illustrated this threat. A maritime dispute could also damage the relationship with Somalia. In addition, recurrent trade disputes with Tanzania could hinder the integration of the East African Community, in which the country plays a pivotal role.

- The perception of the business climate remains constrained by chronic political instability and infrastructure bottlenecks, but the country continues to reform its business environment. The progress made is reflected in Kenya's 56th place worldwide (out of 190 countries) and number-three ranking in sub-Saharan Africa. The measures being taken aim in particular to reduce payment delays, by ensuring, for instance, that the Treasury pays its suppliers within 60 days.

**Last update:** February 2020

## African Economic Outlook – Kenya

### Macroeconomic performance

Real GDP grew by an estimated 5.9% in 2019, driven by household consumption and investment on the demand side and services on the supply side (such as public administration, information technology, finance and insurance, and transport and storage). GDP was down from 6.5% in 2018, caused mainly by unfavourable weather and reduced government investment. At 5.2%, inflation remains within the central bank's  $5 \pm 2.5\%$  target band.

The exchange rate remained stable due to the narrowing current account deficit, from 5.0% of GDP in 2018 to 4.9% in 2019 thanks to increased transfers. Foreign exchange reserves rose from \$9 billion in 2018 to \$9.4 billion at the end of August 2019, equivalent to 6 months of imports, or more than the East African Community convergence criterion of 4.5 months. The fiscal deficit is estimated at 7.5% of GDP in 2019, down from 8.8% in 2017, thanks to ongoing fiscal consolidation and greater domestic resources mobilization. Public debt rose to 58% of GDP in 2019, up from 41% in 2013, and became more non-concessional (67%) than concessional (33%).

More of it is held externally (16% of GDP) than domestically (9% of GDP), but the domestic share is increasing. The debt creates risks for refinancing, cost escalation, and foreign exchange. Because of expected liquidity challenges, the IMF elevated Kenya's debt stress rating from low to moderate in 2018. Kenya's economic growth has not been inclusive enough: poverty fell to 36% in 2015/16 from 46% in 2005/6. Unemployment fell marginally from 9.5% in 2014 to 9.3% in 2018. The bottom income quintile receives only 4% of income.

### Tailwinds and headwinds

Real GDP is projected to grow 6% in 2020 and 6.2% in 2021. Macroeconomic stability is expected to continue. Inflation, around 5% in 2020 and 2021, is expected to remain within the target range, and the fiscal deficit will narrow in 2020 and 2021. The positive outlook mainly reflects favourable weather, increased crude oil production and exports, continuing foreign direct investment, the benefits of the African Continental Free Trade Agreement, and the government's commitment to the Big Four Agenda aimed at industrialization in health, housing, agriculture, and manufacturing.

The Agenda plans to enhance food security and transform agriculture from subsistence oriented and rain dependent to market oriented, using special economic zones as a manufacturing base to expand exports and boost import substitution. The envisioned structural change depends on quickly transitioning to growth led by the private sector, not the public sector. Reforms to make the investment climate conducive to domestic and foreign investment should extend to the credit market, particularly to enhance access for small and medium enterprises.

Kenya's economic transformation faces challenges in manufacturing, agriculture, the labour market, and macroeconomic stability. Manufacturing's share in GDP has remained at 9% for more than a decade, and manufacturing value added is only 5% of GDP. Agriculture accounted for 52% of GDP, 56% of employment, and 65% of foreign exchange earnings in 2018. The 2018/19 drought slowed economic growth and reduced food security. Informality and unemployment remain high. Four fifths of workers are in the informal economy, and 9.3% of the workforce are unemployed. Investment has been low in sectors with greater capacity to absorb labour. Given the youth bulge, the supply of labour is large, but skills and entrepreneurial activity are limited.

Source: Data from domestic authorities; figures for 2019 are estimates; figures for 2020 and 2021 are projections by the African Economic Outlook team. Data on the budget balance correspond to Kenya's fiscal year, which runs from July 1 to June 30.

## OBSERVATIONS/ANTECEDENTS

当社概要についての文章説明

- Established in 1994, Techno-Plast Ltd is among the leading plastic water tank manufacturers in Kenya. Over the years, the company has consolidated its place on the local market and nowadays is also active in roto molding activities, thus producing plastic products & items for household and agricultural purposes.
- They manufacture regular tanks, loft tanks, underground tanks, transport tanks, household and agricultural multipurpose plastic products. They manufacture tanks from 100% virgin material giving the longest possible life span. All their tanks have an inner layer of special UV stabilized material giving the tank anti-microbial properties. Recently, they acquired state of the art machinery that enables them to manufacture plastic water tanks up to 30,000Lts.
- Over the years, the company has further diversified and today trades in the import, distribution and marketing of various housing equipment and appliances for kitchen, bedroom, living rooms, premium tiles, sanitary wares, etc.

**TECHNO PLAST LTD.**

**BUSINESS INTELLIGENCE REPORT**

当社沿革

- **HISTORY**
- 1994: Founded and initially operating as a hardware trading company.
- 1995: Started roto molding tanks activities.
- 2005: The company acquired a high-end sanitary ware trading company. Since then, it has grown exponentially and currently, it is one of the leaders in the industry. This division of the company deals with a number of items varying for both interior and exterior purposes.
- 2016: Expanded workshop & purchased new delivery vehicles. Production up by 50%, fleet up by 20% (brand new vehicles acquired). The 4 newly acquired trucks will increase delivery capacity.
- 2017: Techno-Plast has acquired new machinery imported for the largest plastic water tank in Kenya so far. It is the only company that manufactures 16,000lts, 20,000lts, 25,000lts and 30,000lts storage water tanks.
- 2019: Celebrating 25 years of incorporation. Acquired two new hino trucks to enhance water tanks delivery.

**Profit & Loss statement**
**決算書分析コメント**

The latest audited financials relate to the year ended 30 April 2019.

Turnover slightly fell by 1.2% yoy to stand at KES1.59Billion in FY19 compared to KES1.61Billion in FY18. Based from our source, the decrease in revenue happened by the fact that a project was turned down in FY19. We also gathered that the company has been dealing solely domestically rather than in export segment for consecutive periods. Cost of sales decreased by 4.7% yoy to KES1.1Billion (FY18: KES1.2Billion) in FY19. Consequently, gross profit level improved to KES468.2Million in FY19 compared to KES430.8Million in FY18 (up by 8.7% yoy). Gross profit margin was higher at 29.4% for the reviewing period (FY18: 26.7%).

Other operating income declined lightly to KES3.1Million in FY19 (FY18: KES3.2Million). On the other side, total operating expenses grew significantly by 37.7% yoy to stand at KES361.8Million for the reviewing period (FY18: KES262.7Million). As such, operating profit level dropped by 36.1% yoy passing from KES171.3Million in FY18 to KES109.5Million in FY19. With depreciation and amortization charges barely changing to KES28.2Million (FY18: KES28.5Million), EBITDA figures dropped from KES199.8Million in FY18 to KES137.7Million in FY19 (down by 31.0% yoy).

Net finance cost stood much higher at KES96.6Million in FY19 (FY18: KES81.4Million), out of which interest on bank overdrafts rose from KES43.3Million to KES64.0Million in FY19. Effective interest rate stood at 17.4%. Hence, PBT level substantially dropped to KES12.9Million in FY19 given it stood high at KES89.9Million in previous FY18. Taxation nearly halved to KES3.9Million in FY19 (FY18: KES6.6Million).

Ultimately, net profit substantially decreased by 89.1% yoy to stand at KES9.1Million in FY19 compared to KES83.3Million in FY18.

**Balance Sheet**

Fixed assets level, which solely consisted of property, plant & equipment, increased by 8.3% yoy to KES1.0Billion for the period under review (FY18: KES940.1Million). Additionally, it should be mentioned that the company made further acquisition of the latter, with figures amounting to KES110.6Million in FY19 (FY18: KES75.4Million).

Liquidity wise, current assets fell by 11.7% yoy to KES624.0Million in FY19 (FY18: KES707.1Million), driven by a significant decrease of 14.7% yoy in trade receivables which stood at KES534.7Million (FY18: KES627.2Million). Cash and cash equivalent level stood much better at KES29.0Million for the reviewing period (FY18: KES11.3Million). Current liabilities grew by 5.0% yoy to KES1.1Million in FY19, which was probably attributable to an increase of KES45.2Million in bank overdrafts level. Trade payables figures declined to KES509.8Million (FY18: KES521.8Million). As such, working capital worsened to negative KES482.1Million in FY19 (FY18: negative KES346.2Million). In terms of ratios, current ratio declined to 0.56 times (FY18: 0.67 times). Quick ratio fell to 0.51 times (FY18: 0.61 times). Average creditors turnover was quite stable at 165 days (FY18: 161 days).

Leverage wise, total interest bearing debt level decreased by 2.1% yoy to KES554.8Million in FY19 (FY18: KES567.0Million). Short term borrowings increased to KES448.9Million (FY18: KES398.9Million), out of which KES386.6Million stood for bank overdrafts (FY18: KES341.3Million). Long term borrowings decreased to KES105.9Million in FY19 (FY18: KES168.1Million). In terms of equity, it slightly improved to KES412.0Million in FY19 (FY18: KES405.9Million). As such, Interest bearing debt-to-Equity Ratio stood barely changed to 1.35 times in FY19 (FY18: 1.40 times). Gearing ratio remained high at 2.99 times (FY18: 3.06 times). Total interest bearing debt over Total assets ratio was stable at 0.34 times. Given higher fixed assets level, Total interest bearing debt over Fixed asset ratio lightly declined to 0.54 times in FY19 (FY18: 0.60 times). Interest cover was lower at 1.13 times (FY18: 2.10 times). DSCR fell to 0.87 times in FY19 (FY18: 1.44 times).

Solvency related, the Altman Z-score decreased from 1.55 in FY18 to 1.07 in FY19, which was below the benchmark of 1.80 for companies with high probability of going bankrupt.

**Ratios**
**Probability**

- Gross profit margin improved to 29.4% in FY19 (FY18: 26.7%).
- Operating profit margin declined to 6.9% in FY19 (FY18: 10.6%).
- Net profit margin was low at 0.6% in FY19 (FY18: 5.2%).

**Gearing**

- Interest bearing debt-to-Equity Ratio stood barely changed to 1.35 times in FY19 (FY18: 1.40 times).
- Gearing ratio remained high at 2.99 times (FY18: 3.06 times).
- Total interest bearing debt over Total assets ratio was stable at 0.34 times.
- Given higher fixed assets level, Total interest bearing debt over Fixed asset ratio lightly declined to 0.54 times in FY19 (FY18: 0.60 times).

**Liquidity**

- Current ratio declined to 0.56 times (FY18: 0.67 times).
- Quick ratio fell to 0.51 times (FY18: 0.61 times).
- Average creditors turnover was quite stable at 165 days (FY18: 161 days).

**Solvency**

- The Altman Z score decreased to 1.07 in FY19. A score below 1.8 means the company is probably headed for bankruptcy, while companies with scores above 3.0 are not likely to go bankrupt. In this case, the result was unsatisfactory.

# STRATEGIC INSIGHT'S FINANCIAL STRENGTH GAUGE (SFSG)

In cases whereby financial information is limited or unavailable, we have developed a model that capture qualitative elements and market intelligence as well as sector & economic outlook to gauge the financial strength of a company.

	SFSG Range	Financial Strength Perception
	AA+ to AAA	Excellent
	A+ to AA	Very good
	BBB- to A	Good
	B to BB+	Poor
	C or lower	Very poor

最終評価及び各種評点

As such, for the company under review, we categorise the financial risk level associated with the company as follows:

Actual SFSG	Actual Financial Strength Perception
BBB+	Moderate

## Factors taken into consideration in the model

# STRATEGIC INSIGHT'S CREDIT RISK SCORE (SCRS)

Strategic Insight's Credit Risk Score (SCRS) is a statistical model which takes into consideration financial indicators as well as other non-financial parameters like Sector performance and outlook, Payment behaviour, Management risk, Charges inscribed on the company's assets, Other qualitative information gathered from the market, Any other information that might have a positive or negative impact on the company's performance. The scale is between 0 (Very poor) to 100 (Excellent).

Grading	Score	Risk Level
Superior	Fully cash secured, secured by government guarantee/international bank guarantee	Superior
Good	80+	Very low risk level
Acceptable	70-80	Risk is much below than normal
Marginal/Watchlist	60-69	Risk is normal
Special Mention	55-59	Risk is slightly higher than normal
Substandard	45-54	Risk is significantly higher than normal
Doubtful	35-44	Very high risk level
Bad/Loss	<35	Cases of default/Insolvent

Actual SCRS	Grading	Risk level
53	Substandard	Risk is significantly higher than normal

Moody's equivalent classification for Actual SCRS	Previous SCRS	Probability of default Year 1
Ba1	58	0.8756%
		Probability of default Year 2
		1.0208%
		Probability of default Year 3
		1.1900%

# CREDITWORTHINESS OPINION

## Trade credit

Based on all the information gathered (both qualitative and quantitative), please find below our recommendation:

<b>Credit limit requested by client (if any)</b>	-
<b>Maximum Individual credit limit recommended</b> <i>(system generated)</i>	USD 154,000 <b>€ 135,000</b> MUR 5,400,000
<b>Maximum Global credit limit recommended</b> <i>(system generated)</i>	USD 343,000 <b>€ 300,000</b> MUR 12,000,000

**UNDERWRITER'S REMARKS**

**Maximum Individual limit recommended:** EUR135,000

**Maximum group limit recommended:** EUR300,000

**Comments:**

1. Incorporated since 1994.
2. Well known and well established in the country.
3. Slight decrease in turnover level and dropped in profit level.
4. Moderately geared.
5. Some lawsuits noted but no material adverse effect as per management.

**Trade credit limit recommended**

Max ICL USD 154,000	Max GCL USD 343,000
---------------------------	---------------------------

## Financial credit

Based on all the information gathered (both qualitative and quantitative), please find below our recommendation:

<b>Is company worthy for financial credit?</b>	Sound for financial credit allocation

**UNDERWRITER'S REMARKS**

1. Based on our analysis, concern is sound for financial credit.
2. However, more information required to assess company.
